FORGE REALM PS-02

Notice Decoder

A notice lands in the class group. It is in your calendar before you open the chat.

Team **Nova Nexus**

Ankit Kumar (Team Leader), **Ankit**, **Ashwani Tanwar**

Rules that show their reasons. Every date, time and place points to the exact words it came from.

Zero-touch. WhatsApp group, college email or the share sheet feed the same rules; certain events go straight into the calendar, the student is asked only about an uncertain field.

Runs on the device: offline, the notice never leaves the phone, **₹0** per notice.

3 of 3
events right on the PS-02 example

01 The problem, and the PS-02 example answered

Dates, times and rooms hide inside paragraphs. Students miss them, or find the clash too late.

NOTICE

All III-year CSE students: Internal Test 2 will be held on 13 Nov 2026 from 10:00 AM to 11:30 AM in Room 204. Lab records must be submitted to the department office by 12:00 noon on 13 Nov. A guest lecture on "AI in Healthcare" is scheduled on 13 Nov, 11:00 AM to 12:30 PM, Seminar Hall.

Students miss notices

APSIT Mumbai pulled notices out of WhatsApp groups: "many students miss important notices".

The class rep carries them

Jamia keeps academic notices in official class groups run by the class representative.

Detected event	Type	Date	Time	Venue
Internal Test 2	Test	13 Nov 2026	10:00 AM – 11:30 AM	Room 204
Lab record submission	Deadline	13 Nov 2026	by 12:00 PM	Department office
Guest lecture: AI in Healthcare	Lecture	13 Nov 2026	11:00 AM – 12:30 PM	Seminar Hall

Clash: 30 minutes

Test and guest lecture overlap 11:00 to 11:30 AM.

Clash: deadline inside

The 12:00 PM deadline falls during the lecture.

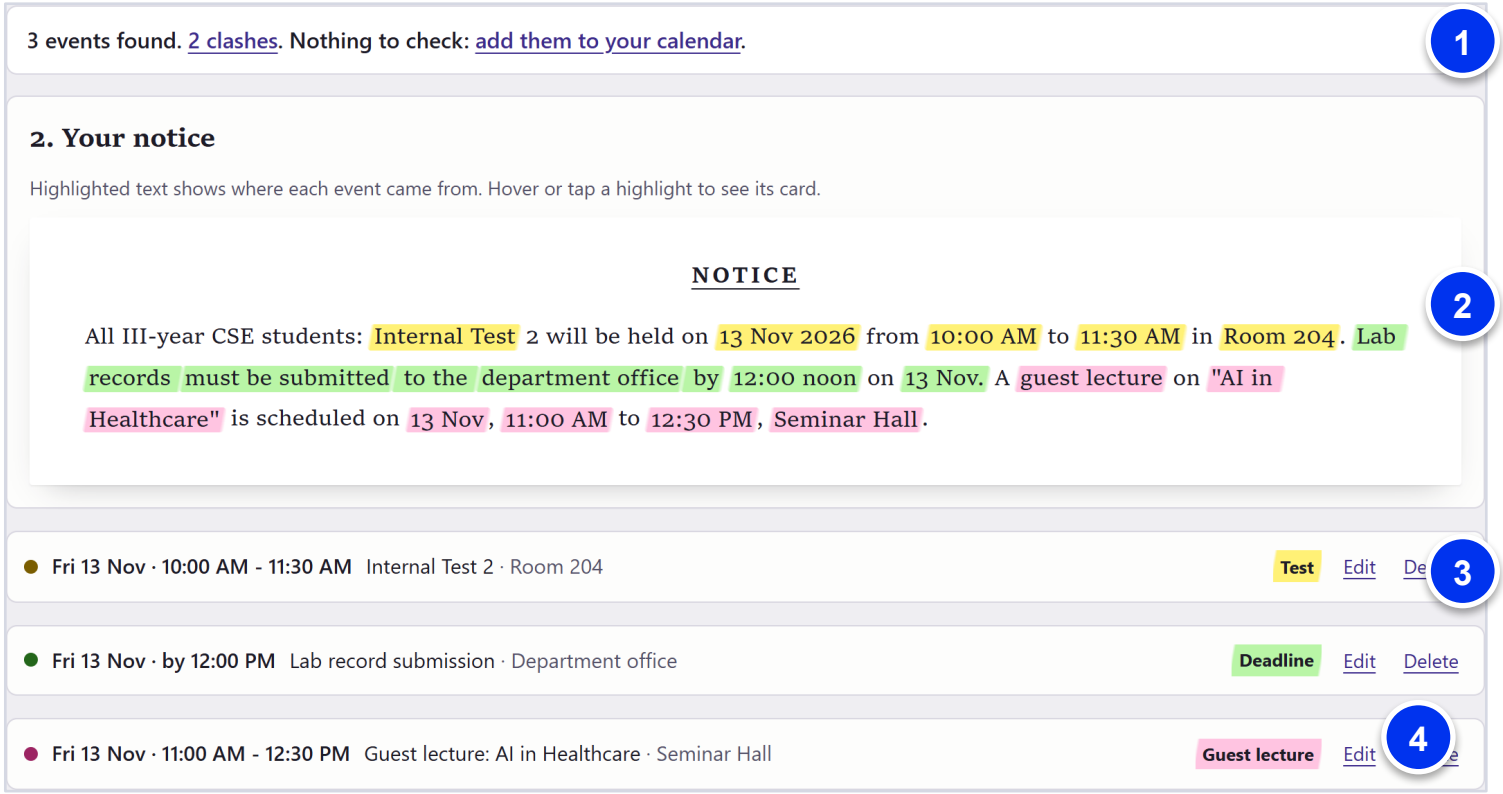

No clash

The test ends at 11:30 AM, before the deadline.

Action: finish the lab record before 10:00 AM, or ask the coordinator about the lecture.

02 Our solution

The real app on the PS-02 example. The answer first, a reason for every field, a form only where there is a doubt.

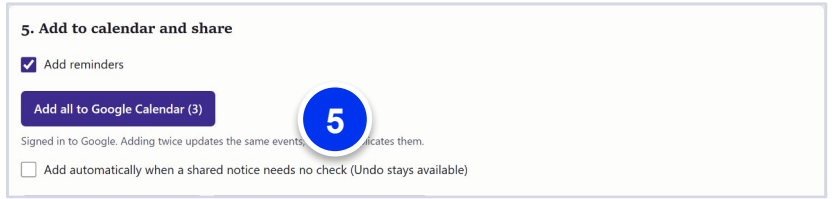

1 One-line answer first
3 events found. 2 clashes. Nothing to check.

2 Highlighter colours
Each event's words in the notice, in its own colour; "Show in notice" lights them up.

3 Clean events are one line
Nothing to fill in. Edit opens the full card if you want it.

4 Only doubts open a form
An amber field blocks export until fixed or marked "Looks right".

5 One tap to the calendar
"Add all to Google Calendar" writes them in; .ics and the class link stay as backups.

03 Zero-touch: four ways in, one engine

Pasting was three steps too many. The student is asked only for the one field that is uncertain.

WhatsApp class group

Android companion reads the group's notifications, decodes on the phone, writes the phone calendar.

College email

Apps Script in the student's own Gmail, every 15 min, straight into Google Calendar.

Share or paste

Installed web app sits in WhatsApp's share sheet; decodes on arrival; one tap to Google Calendar.

Class rep publishes

The class subscribes once to a calendar link that updates itself when a notice is revised.

Same rules engine

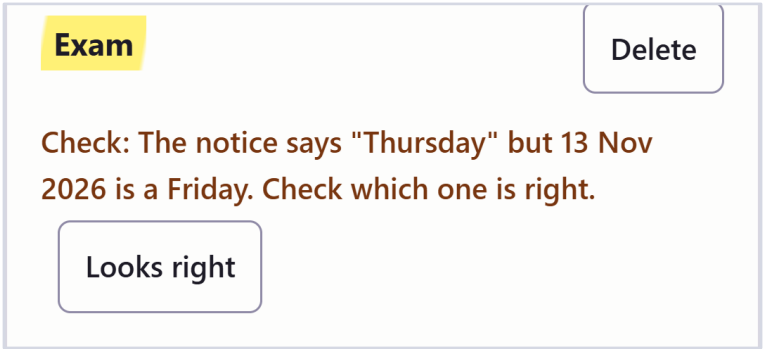

Dates, times, venues, clashes, a "why" for every field. One mapping to calendar UIDs, so adding twice updates, never duplicates.

Nothing uncertain → added, with Undo

Notification: "Added 3 events". Google Calendar, the phone calendar or the class feed.

An amber field → ask for that one only

"Thursday, but 13 Nov 2026 is a Friday." Looks right, or fix it. PS-02's review rule, kept.

Honest limits: a notification can truncate a very long notice (the share sheet is the fallback); Google refreshes subscribed feeds in 12 to 24 hours; the companion app is Android only.

04 Rules for real notices, tested

Written for the way Indian college notices are really written. Each line below is a test that runs on every push.

"04/05/2027"
Day first, 4 May; asks if it means 5 April

"Thursday, 13 Nov 2026"
13 Nov is a Friday: asks which one is right

"today's drive" + "Date: 05 Oct"
"today" is the notice's date, not paste day

Two exams, both at 10 AM
Two events and a clash, never one merged card

"POSTPONED to 20 Nov"
Moves the event, shows the old date

"13 Nov - DBMS - 10 AM to 1 PM - Room 101"
Timetable rows: subject, kind, room

"available 1:30pm-5pm, 60 min"
A window: "take it 1:30 to 2:30 PM", not a clash

"7/10 marks", "Unit 3/4"
Not dates. "2026-11-20", "0700 hrs", "by EOD" are

"this week or next week"
Not scheduled yet; never a made-up date

गणित की परीक्षा 13 नवंबर सुबह 10 बजे
Hindi months, times, event words and rooms

27
engine tests

63
browser checks

8+7+5
feed, Gmail, app tests

6
real notices as fixtures

Why rules, not AI
Same answer every time, a reason for every field, nothing sent anywhere, ₹0 per notice. Seven public notice tools we read send the text to a model and check no clashes.

Not done yet: photos of notices, spelling mistakes ("tset", "Nvo" leave the date empty and keep export locked), iPhone notification reading (iOS does not allow it).

05 Who pays

Free for every student. The department pays for the class calendar that saves the class rep's time.

Plan	Who uses it	Who pays	What they get	Our cost
Free	Every student	Nobody	Paste, share or auto-read from a group; check only amber fields; clashes; Google Calendar one tap, .ics, class link	About ₹0: runs on the phone
Department plan	Class rep or teacher	Department; HOD signs off	Publish once; the class subscribes once; the calendar updates itself when a notice is revised; clash report across the term	One free-tier Worker and storage

₹2,999

per department per year (proposed), first term free

Why pay when WhatsApp is free?

Today the class rep forwards every notice by hand and nobody's calendar moves when a date changes. The plan publishes once, moves it for everyone, and catches term-wide clashes.

Pilot: one department, one term

Count notices published and clashes caught. It works if the HOD pays for the next term. The free link version already works today.

For scale: Fedena, a full college ERP, lists $999 to $1,699 a year for a whole college, so one feature for one department must cost far less.

Honest status: no college has paid yet. Built and tested: web app, class feed, Gmail script, Android companion; 27 + 8 + 7 + 5 engine and integration tests, 63 browser checks, CI on every push.
