FORGE REALM PS-02

Notice Decoder

Paste a messy college notice. Get clear events, catch clashes, add them to your calendar.

Team **Nova Nexus**

Ankit Kumar (Team Leader), **Ankit**, **Ashwani Tanwar**

Rules that show their reasons. Every date, time and place points to the exact words it came from.

Runs in the browser: works offline, the notice never leaves the phone, **₹0** per notice.

3 of 3
events right on the PS-02 example

145 of 152
checks right on 20 new messy notices

01 The problem

Dates, times and rooms hide inside long paragraphs, so students miss them or find clashes too late.

NOTICE

All III-year CSE students: Internal Test 2 will be held on 13 Nov 2026 from 10:00 AM to 11:30 AM in Room 204. Lab records must be submitted to the department office by 12:00 noon on 13 Nov. A guest lecture on "AI in Healthcare" is scheduled on 13 Nov, 11:00 AM to 12:30 PM, Seminar Hall.

The PS-02 example: **three things on one day.** Two of them **clash**, and nothing in the text says so.

Students miss notices

APSIT Mumbai stopped posting notices in WhatsApp groups because "many students miss important notices" (Sep 2025).

The class rep carries them

Jamia now keeps academic notices in official class groups run by the class representative (Sep 2026).

Clashes reach the news

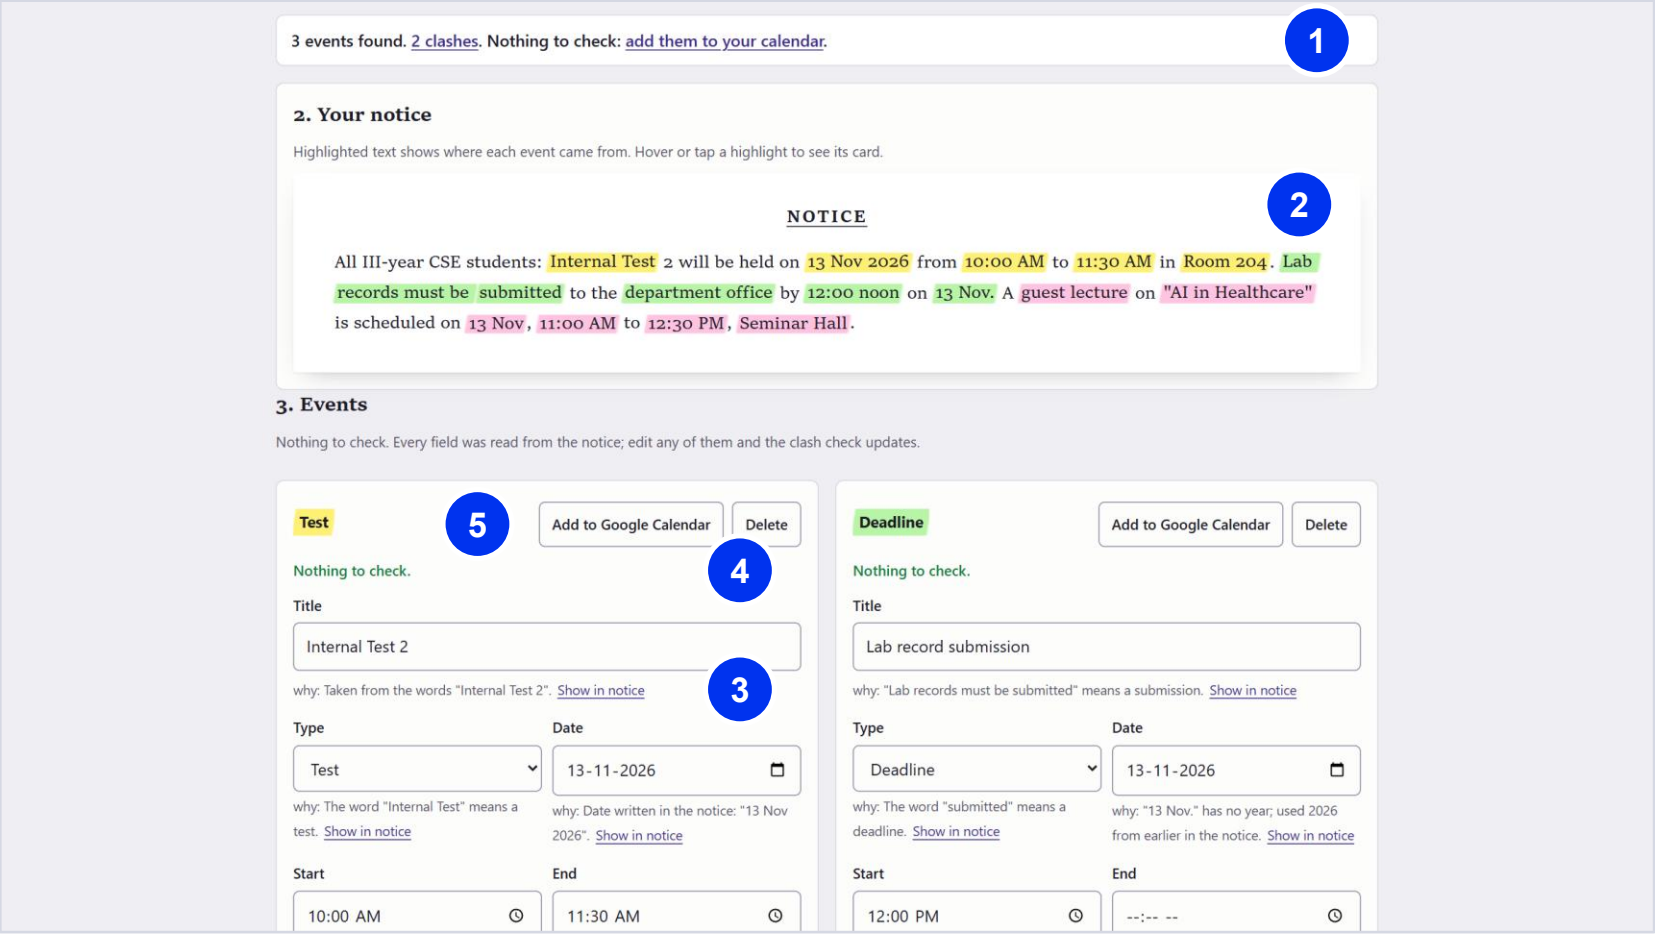

St Agnes College, Mangaluru set semester exams in the Dasara holidays; students protested (PTI, Oct 2026).

Who it is for

Students first. Then the class rep who forwards every notice by hand.

02 Our solution

The real app on the PS-02 example. One paste, three events, every field explained.

1. **One-line answer first**
   3 events found. 2 clashes. Nothing to check.

2. **Highlighter colours**
   Each event's words in the notice, in its own colour.

3. **A reason for every field**
   "why" line + Show in notice lights up the words.

4. **Only doubts ask**
   Sure fields say "Nothing to check"; unsure ones turn amber.

5. **One tap to the calendar**
   Google Calendar per event, or one .ics file for all.

03 How it works

Plain rules, in order. Each step leaves a reason the student can read.

Paste the notice
WhatsApp text, a PDF copy, the board

Split it
Sentences, and "Date:" / "Time:" lines kept together

Find dates, times, places
13 Nov, 13/11/2026, 2 PM, 14:00, 12 noon, kal 5 baje

Notice rules
"today" = the notice's date, postponed, windows, TBD

Add to calendar
One .ics file, or Google Calendar in one tap

Clash check
Overlap = each starts before the other ends; a deadline is a point

Student checks
Only amber fields; export stays locked until then

Events with reasons
Each field shows its words in the notice

Runs in the browser. No server and no API key: it works offline, the notice never leaves the phone, and a notice costs **₹0** to decode.

04 PS-02, point by point

Every "must have" in the problem statement, and how we checked it.

PS-02 asks	What Notice Decoder does	Checked on
Title, type, date, start, end, venue	Reads each field and shows the words it came from	PS example: all 3 events, every field
"13 Nov", "13/11/2026", "2 PM", "14:00"	All four, plus "12 noon", "1:30pm-5pm", "FN", "kal 5 baje"	Engine tests
Review and fix every field before export	Every field editable; export locked until amber fields are fixed or marked "Looks right"	Browser test at phone width
Overlap: each starts before the other ends	"Clash. They overlap from 11:00 to 11:30 AM (30 minutes)."	PS example
A deadline is a point; it clashes inside an event	"The 12:00 PM deadline falls during the guest lecture"	PS example
A valid .ics for common calendar apps	India time zone, reminders by event type, repeats for multi-day events	Read back by Python's icalendar parser
Suggest an action	"Finish Lab record submission before 10:00 AM"	PS example

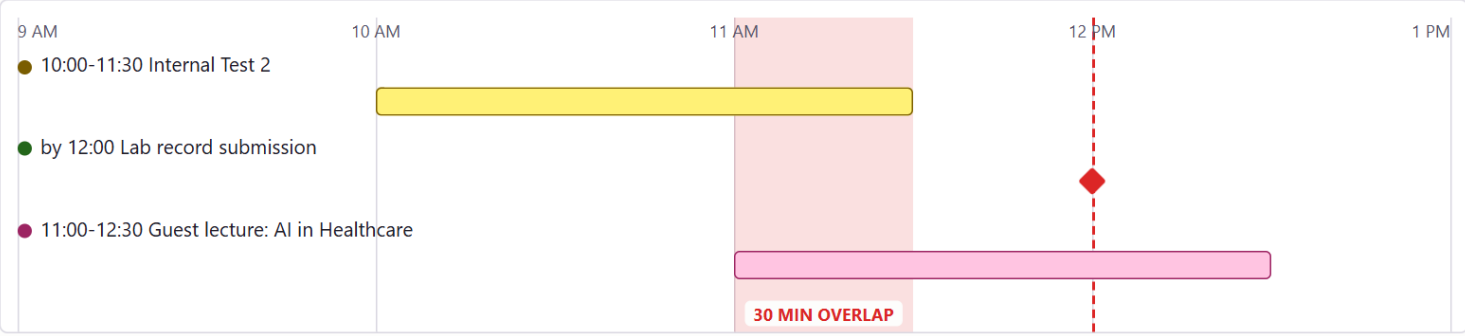

05 The PS-02 example, end to end

Same three answers as the problem statement, from the real app.

4. Clashes

Each day with two or more events is checked below. Red means the times collide.

Fri, 13 Nov 2026

Clash check	Result
Internal Test 2 x Lab record submission	**No clash.** The 12:00 PM deadline is after the test ends at 11:30 AM.
Internal Test 2 x Guest lecture: AI in Healthcare	**Clash.** They overlap from 11:00 to 11:30 AM (30 minutes). Ask the coordinator about "Guest lecture: AI in Healthcare", or decide which one to attend; 30 minutes overlap.
Lab record submission x Guest lecture: AI in Healthcare	**Clash.** The 12:00 PM deadline falls during the guest lecture (11:00 AM to 12:30 PM). Finish "Lab record submission" before 10:00 AM: from 10:00 AM to 12:00 PM you are in "Internal Test 2" and "Guest lecture: AI in Healthcare".

No clash

Test ends 11:30 AM, before the 12:00 PM deadline.

Clash: 30 minutes

Test and guest lecture overlap 11:00 to 11:30 AM.

Clash: deadline inside

The 12:00 PM deadline falls during the lecture.

Suggested action

Finish the lab records before 10:00 AM: from 10:00 to 12:00 you are in the test and the lecture.

06 Beyond the obvious: real notices

Rules written for the way Indian college notices are really written.

"POSTPONED to 20 Nov"
Moves the event and shows the old date

"today's drive" + "Date: 05 Oct"
"today" means the notice's date, not the day you paste it

"available 1:30pm-5pm, 60 min"
A window: "take it 1:30 to 2:30 PM", not a clash

"this week or next week"
Goes to Not scheduled yet, never a made-up date

"results today 9 pm" and "next day"
Both shown in amber until the student picks one

"04/05/2027"
Read day first (4 May) and asks if it means 5 April

"lecture cancel ho gayi"
Reported as cancelled, never added

"kal shaam 5 baje"
5 PM tomorrow, flagged: kal can also mean yesterday

Why rules, not AI: the same answer every time, a reason for every field, offline and ₹0. Rules missed **7 of 152** checks, mostly spelling mistakes: the only place an AI fallback would help.

07 Tested, and compared

Numbers from our own test runs and from reading other teams' public code.

19 of 19
engine tests pass

37 of 37
browser checks pass at phone width

145 of 152
checks right on 20 new messy notices

3 of 3
.ics files read back by Python's icalendar parser

Not done yet: photos of notices, Hindi script, spelling mistakes ("tset", "Nvo" leave the date empty and keep export locked).

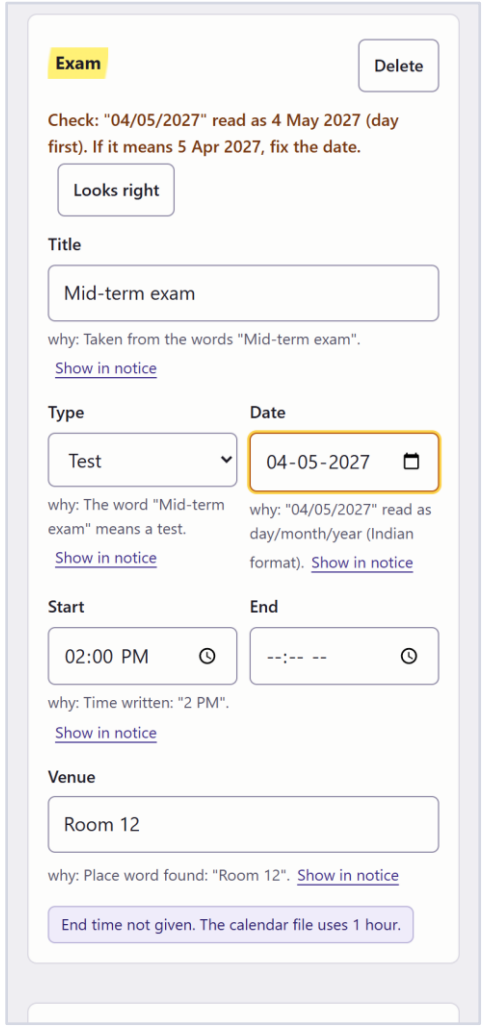

Public project (Oct 2026)	Calendar file	Clash check
7 notice tools on GitHub, mostly AI summaries	0 of 7	0 of 7
edt-tamis: university timetable files, not notices	Yes	Yes
Notice Decoder	Yes	Yes, with the reason

We read their code, not their README: no VCALENDAR, no clash or overlap check in any of the 7.

Closest on rules: one tool reads DD/MM dates offline, but has no clock times, calendar file or clash check.

08 Easy on a phone

A first-time user knows where to look: the answer first, then only what needs a check.

1 It says what to check
"04/05/2027" read as 4 May 2027. If it means 5 Apr, fix the date.

2 The doubtful field is outlined
Amber, on the field itself; the sure fields stay plain.

3 "Looks right" or fix it
Export and Google Calendar unlock only after this.

Plain words: "Clash. They overlap from 11:00 to 11:30 AM (30 minutes)." No codes, no jargon.

One-line answer at the top
"3 events found. 2 clashes. Nothing to check."

Colour links card and notice
Same highlighter colour on both

Fits a 360 px phone
No sideways scroll; the timeline fits the screen

Errors say what to do
"Too short to be a notice. Paste the whole message, with its date and time."

09 Who pays

Free for every student. The department pays for the part that saves the class rep's time.

Plan	Who uses it	Who pays	What they get	Our cost
Free	Every student	Nobody	Paste, check, clashes, calendar file, Google Calendar	About ₹0: runs on the phone
Department plan (planned)	Class rep or teacher	Department; HOD signs off	Decode once, publish; the class subscribes to one calendar link that updates itself	A small server and storage

₹2,999

per department per year (proposed), first term free

Why pay when WhatsApp is free?

The plan does the typing, catches clashes before publishing, and moves an event for everyone when a notice is revised.

Pilot: one department, one term

Count notices published and clashes caught. It works if the HOD pays for the next term.

For scale: Fedena, a full college ERP, lists $999 to $1,699 a year for a whole college, so one feature for one department must cost far less.

Honest status: no college has paid yet; the price is our estimate for the pilot to test.
