SETU 2026

NOTICE DECODER

A notice lands in the class group. It is in your calendar before you open the chat.

- **Problem Statement ID –** PS-02
- **Problem Statement Title –** Notice Decoder
- **Realm –** Forge Realm
- **Category –** Software (web + Android)
- **Team Name –** Nova Nexus
- **Members –** Ankit Kumar (Leader), Ankit, Ashwani Tanwar

NOTICE DECODER

Proposed solution

Paste, share or auto-read a college notice. It becomes **calendar events**, **clashes** are found, and the student is asked only about an **uncertain field**.

1 The answer first **2** Highlighter shows the source words **3** One clean line per event

How it addresses the problem

Every field shows why: the exact words it came from.

Clash check: overlap, and a deadline that falls inside another event.

One tap to Google Calendar; .ics and a class link as backups.

Innovation and uniqueness

Plain rules on the phone, no AI: same answer every time, the notice never leaves the device.

Asks, never guesses: "Thursday, but 13 Nov 2026 is a Friday."

3 of 3 events right
and both clashes found on the PS-02 example

TECHNICAL APPROACH

Technologies used

Engine: plain JavaScript rules; runs in the browser. No server, no AI model.

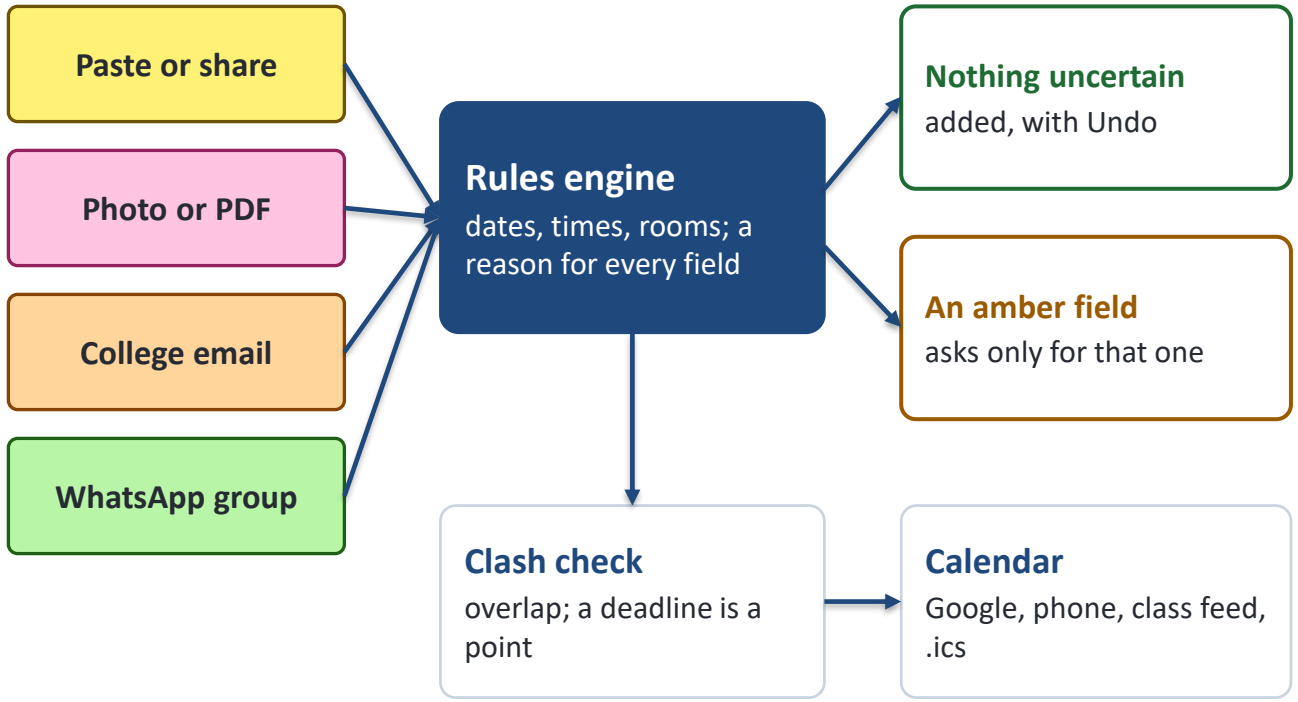

Inputs: paste or share (installable web app), photos and PDFs read on the device, a Gmail Apps Script, an Android companion app.

Calendar: .ics file (India time, reminders), Google Calendar in one tap, a class feed on a free Cloudflare Worker.

Tests on every push: 32 engine, 9 feed, 7 Gmail, 5 app tests; 73 browser checks.

One engine everywhere: the web app, the Gmail script and the Android app run the same bundled rules file.

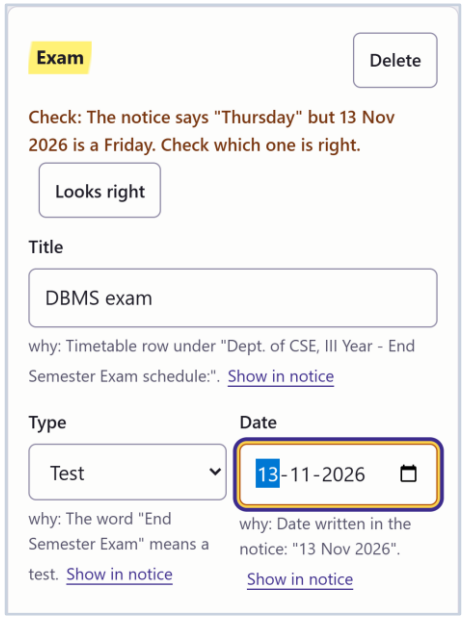

Methodology

Re-adding a notice **updates** the same calendar events instead of copying them (one ID per event).

FEASIBILITY AND VIABILITY

Works today

✓ Live now
anki1kr.me/NoticeDecoder

✓ Tested
53 tests, 73 browser checks, 6 real notices

✓ ₹0 per notice
runs on the phone; the class feed fits a free tier

Left: a doubtful date is outlined in amber; export waits until it is fixed or marked "Looks right".

Challenges and how we handle them

Long notice cut off in a notification	→ Share or paste reads the full text
Google refreshes a subscribed feed every 12 to 24 h	→ One-tap add writes events at once
Reading WhatsApp needs Android (iOS blocks it)	→ On iPhone: paste, or the Gmail script
Spelling mistakes ("tset", "Nvo")	→ Date stays empty; export stays locked

IMPACT AND WHO PAYS

Who gains what

Who	Today	With Notice Decoder
Student	Reads a paragraph, misses a date	Events in the calendar; checks only amber fields
Class rep	Forwards every notice by hand	Publishes once; the class subscribes once
Department	Clashes found too late	A clash report across the term

For scale: Fedena, a full college ERP, lists $999 to $1,699 a year for a whole college, so one feature for one department must cost far less.

Honest status: no college has paid yet.

Business model

₹2,999 per department per year

proposed price; the first term is free

Free for every student: paste, share or auto-read; clashes; Google Calendar, .ics, class link. Costs us about ₹0.

Department plan: the class rep or a teacher publishes; the HOD signs off. One free-tier Worker and storage.

Why pay when WhatsApp is free? Nobody's calendar moves when a date changes; the plan **moves it for everyone** and catches term-wide clashes.

Pilot: one department, one term; it works if the HOD pays for the next term.

RESEARCH AND REFERENCES

Other notice tools: we read their code (Oct 2026)

Project	Calendar file	Clash check
7 public notice tools on GitHub, most send text to an AI model	0 of 7	0 of 7
edt-tamis: university timetable files, not notices	Yes	Yes
Notice Decoder	Yes	Yes, with the reason

Why the problem is real

APSIT Mumbai moved notices out of WhatsApp groups: "many students miss important notices" (e-notice board post, 23 Sep 2025).

Jamia Millia Islamia keeps academic notices in official class groups run by the class representative (Careers360, 9 Sep 2026).

St Agnes College, Mangaluru set semester exams in the Dasara holidays; students protested (PTI via Careers360, 12 Oct 2026).

Price anchor: fedena.com/pricing-and-plans. **Problem statement:** SETU 2026 Forge Realm PS-02.
