SETU 2026

NOTICE DECODER

Paste a college notice. Its dates go into your calendar, with clashes marked.

NOTICE DECODER

The problem

Notices come as long paragraphs. Students miss dates, and find clashes too late.

Our idea

Paste a notice. The app finds each event, shows the words it read, checks for clashes and adds the **calendar events**.

1 The answer first **2** Each date shows the words it came from **3** One line per event

Why it is different

Shows its working. Every date, time and room points to the words it came from.

Asks when unsure. "Thursday? But 13 Nov 2026 is a Friday."

Finds clashes. Two events at once, or a deadline during a class.

No AI. Same answer every time, and the reading happens on the phone.

3 of 3 events right
and both clashes found on the PS-02 example

TECHNICAL APPROACH

What we use

App: a web page in plain JavaScript. It runs in the browser, so it works offline.

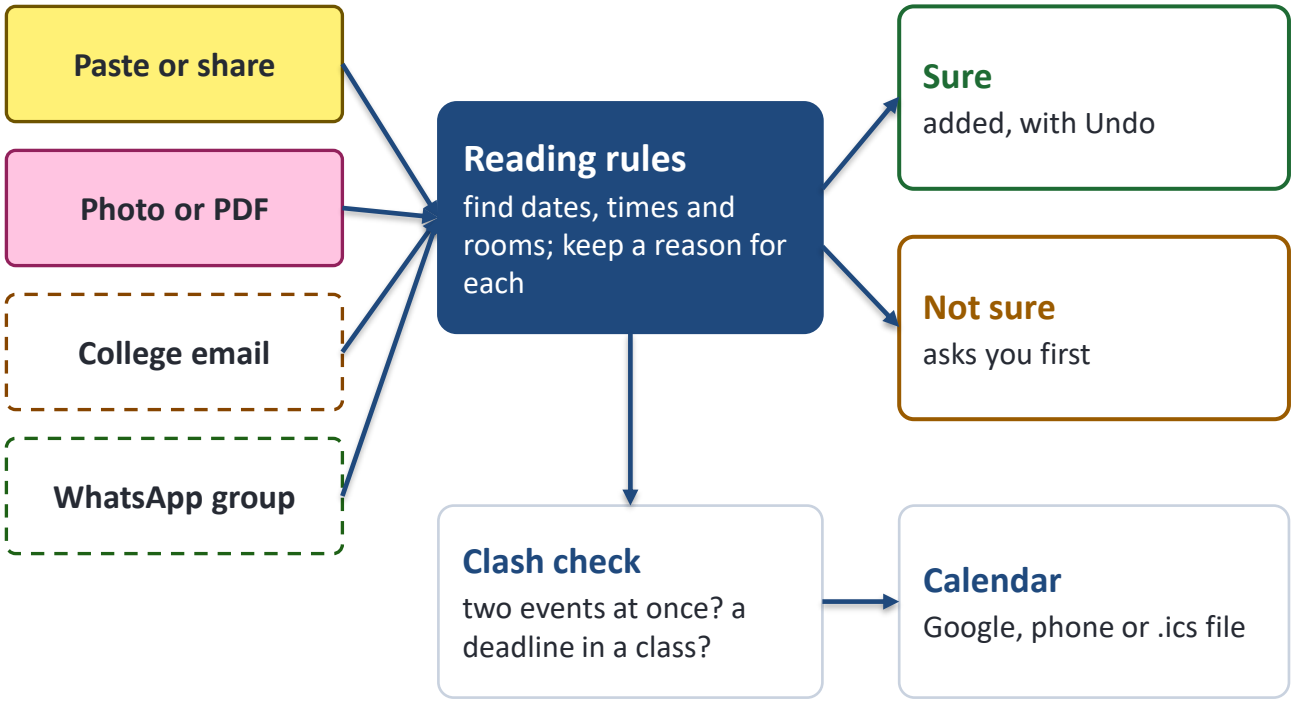

Reading rules: dates (13 Nov, 13/11/2026), times (2 PM, 14:00, 12 noon), rooms, and words like "postponed to".

Photos and PDFs: read on the phone; every date from a photo is marked for a check.

Calendar: an .ics file, Google Calendar in one tap, or a class calendar link from a free Cloudflare Worker.

Tested: 34 rule tests and 75 browser checks run on every change.

How a notice becomes events

Dashed boxes need a one-time install: the Gmail script or the Android app.

Adding the same notice twice **updates the events**. It does not make copies.

SCOPE AND FEASIBILITY

What is ready

Works now on the website

Paste or share a notice, a photo or a PDF. Events with reasons, clash check, review before export, .ics file, Hindi and Hinglish times. A class calendar link: the class rep publishes, the class subscribes.

Built, needs a one-time install or sign-in

Google Calendar in one tap (Google sign-in), college email (Gmail script), WhatsApp group reading (Android app), Chrome extension.

Next

Try it with one real class for a term. Read more notice styles. Handle spelling mistakes.

Problems we expect, and our plan

A long notice is cut off in a phone notification	→ Share or paste the full text
Google updates a shared calendar only every 12 to 24 hours	→ One-tap add writes the events at once
iPhone does not let apps read WhatsApp	→ On iPhone, paste the notice or use the email script
Spelling mistakes ("tset", "Nvo")	→ The date stays empty and export stays locked

IMPACT AND WHO PAYS

Who gains what

Who	Today	With Notice Decoder
Student	Reads a long paragraph, misses a date	Gets the dates in the calendar; checks only the unsure ones
Class rep	Forwards every notice by hand	Publishes once; the class subscribes once
Department	Finds clashes too late	Sees every clash in the term

For scale: Fedena, a full college ERP, lists $999 to $1,699 a year for a whole college. One feature for one department must cost far less.

Where we are: no college has paid yet.

Who pays

₹2,999 per department per year

our proposed price; the first term is free

Free for students: everything in "Works now". It runs on the phone, so it costs us about ₹0.

Department plan: the class rep or a teacher publishes notices, and the HOD pays.

Why pay? On WhatsApp, nobody's calendar changes when a date changes. With the plan, it changes **for the whole class**.

Pilot: one department for one term. If the HOD pays for the next term, it works.

RESEARCH AND REFERENCES

Other notice tools (we read their code, Oct 2026)

Project	Calendar file	Clash check
7 notice tools on GitHub, most send the text to an AI model	0 of 7	0 of 7
edt-tamis: university timetable files, not notices	Yes	Yes
Notice Decoder	Yes	Yes, with the reason

Why the problem is real

APSIT Mumbai stopped sharing notices in WhatsApp groups because "many students miss important notices" (e-notice board post, 23 Sep 2025).

Jamia Millia Islamia keeps academic notices in official class groups run by the class rep (Careers360, 9 Sep 2026).

St Agnes College, Mangaluru set semester exams in the Dasara holidays, and students protested (PTI via Careers360, 12 Oct 2026).

Price: fedena.com/pricing-and-plans. **Problem statement:** SETU 2026 Forge Realm PS-02.
